

One size doesn't fit all.

At Royal Canin we believe that every dog is unique. That's why we've developed individualized formulas for every age, size or lifestyle, designed to provide the exact nutritional requirements for each and every dog.

X-SMALL Formulated for sensitive digestive systems and small bodies, the nutrition in our X-SMALL line is a big deal for tiny dogs. Plus, our kibble is specifically engineered for extra-small dogs' compact jaws.

MINI With special smaller kibble and formulas made to deliver key nutrients and energy, our complete line of MINI formulas can keep your small dog healthy and beautiful no matter what its age.

MEDIUM Our medium line is designed to support a healthy body from the beginning stages of growth all the way through adulthood and aging.

MAXI Big dogs don't just look different from other dogs—they have unique physiological traits that make them different both inside and out. That's why we've built a highly specialized line of formulas made just for them.

GIANT With maximum support for bone and joint health, our GIANT line is designed to keep even the biggest dogs active and mobile for life.

For over 45 years, Royal Canin has been designing and producing nutrition that puts dogs first. But just because we've been successful in the past doesn't mean we aren't constantly looking to the future. Through constant study and observation, we work hard every day to create innovative nutrition designed specifically for your dog.

SIZE MATTERS

How premium nutrition can help your dog thrive

SIZE HEALTH NUTRITION

A different breed indeed.

While many people may treat their dogs like members of the family, the fact is that our four-legged friends couldn't be more different than we are physically. Dogs draw their energy primarily from fat, so their optimal diet is very different from that of humans. And what's more, no two dogs are the same.

Size matters.

Take one look at a Great Dane standing next to a Chihuahua, and it's clear that they're very different animals. But the differences are more than skin deep. Dogs of different sizes metabolize food differently. And the same goes for dogs of different ages, breeds, lifestyles and physical conditions.

The fundamental differences between dog sizes

	Average Adult Weight	Growth Duration ¹	Growth Range ²
X-SMALL	up to 8 lbs.	10 months	x 18
MINI	9-22 lbs.	10 months	x 20
MEDIUM	23-55 lbs.	12 months	x 50
MAXI	56-99 lbs.	15 months	x 70
GIANT	over 100 lbs.	18-24 months	x 100

¹Birth to adulthood. ²Ratio of birth weight to adult weight.

SIZE HEALTH NUTRITION
